

You or someone you love has experienced an adverse reaction to a vaccine, or, you are simply curious about vaccines and want to learn more (e.g., something doesn't "seem right" with what you're being told).

Your curiosity leads you to pose questions to your family, friends, and/or doctor, most (or all) of whom either: diminish your concerns, dismiss them altogether, or call you crazy for even broaching the subject.

Even after reassurance from various parties that vaccines aren't to blame for X's health issues, you still feel uneasy. You watched your loved one (or yourself) change for the worse, after vaccination.

Now is the time to take matters into your own hands. Begin your research journey.

The first realization you must make is the following: family and friends pushing you to vaccinate are generally brainwashed by mainstream media [which is controlled by the pharmaceutical industry]...

...or their doctors, who are trained by pharmaceutically controlled medical school curricula that champion symptom/disease management with drugs, and provide virtually no information on vaccine science, nutrition, or restoring/maintaining health in general.

The second revelation you must experience: vaccines are the most profitable industry in the world; why? For 3 main reasons: They don't require the costs of rigorous, gold standard safety/efficacy testing like all other pharma drugs...

They are almost totally liability free for both the vaccine manufacturers and doctors (if you are harmed - good luck suing and winning a lawsuit)...And...

They are mandated for school attendance in the USA, and in many countries, with limited exemptions. What other product has these conditions? Very inviting for a business (which vaccines are), right?

Ok. You may be shocked at this point. What about the agencies that are supposed to regulate vaccines, and protect us from a greedy, liability free industry, like the CDC, FDA, WHO, etc.?

Unfortunately, they don't have your back either. All those gov't agencies have strong political and financial ties to industry, which has ties to academia. It's a giant revolving door.

So, when you hear your doctor, or the media say, "studies have proven, vaccines are safe" - they're based upon manipulated studies done by industry captured "puppet" agencies like the CDC, FDA, and WHO.

So, where do you find good, objective information about vaccines? Well, you now know where you CAN'T look..

1. CDC, FDA, WHO
2. Mainstream media
3. Your Doctor (if they haven't researched beyond their formal medical education)

Where you DO look...

1. Doctors who have researched vaccines (countless doctors believe vaccines are dangerous after researching, and admit they never learned this in medical school)

2. Sources that do not have a financial or political stake in increasing vaccination rates. Some great examples are activist websites who fight on the frontlines every day for our freedoms, pro bono

3. Studies in the medical literature funded by non governmental sources. These scientists are not "looking for" the conclusion they've been paid to look for.

See our educational resources page for many objective sources of vaccine information.

Your vaccine truth journey has begun!
Congratulations!
Welcome to the light!
The truth shall set you free.

What you or your loved one experienced was real. Follow your instincts. Do not agree to anything before researching.
Godspeed!
